DRS Firmware Release - Version 1.1.0

This is a notification to all customers using the DRS parachute rescue system. We recommend to update all of your DRS units to the current Firmware version 1.1.0.

The Firmware can get downloaded here:

https://cloud.dronerescue.com/index.php/s/FbZFkxNhUFq5iaO/download

Please copy this file to the root-directory of the DRS micro SD memory card. Insert the memory card into the DRS unit and power it up. The LED immediately starts flashing in purple color, showing the firmware update is in progress. If finished, the LED changes to green color for about 3 seconds to indicate the update process was successful.

If the LED will flash in red color after the update, please get in contact with Drone Rescue Systems GmbH.

A video showing this procedure is available here:

https://cloud.dronerescue.com/index.php/s/EhVT71rzQTrdLk3

After a successful update you will find a new file called "bootloader.txt" on the SD card, showing more detailed information. To keep us up to date we advice you to send this file to support@dronerescue.com – Thank you!

```
Bootloader Fw: DRS BOOTLOADER v1.0.4
Bin: FW_1_1_0.bin
HW: 2045
Current Fw: DRS_Parachute v1.0.6
New FW: DRS_Parachute v1.1.0
Update successful
